

FAN IMPACT WALL

SYSTEM

The PUCEST fan impact wall impresses with its simple assembly of individual modules on retaining strips. These modules are mounted step by step. A buffer and clamping strip provides additional safety and stability of the PUCEST impact wall.

The combination of the cost-effective PUCEST PU 65° ShA plate with highly wear-resistant carbide and steel plates for higher wear requirements gives you increased service life while reducing costs.

TIME AND MONEY SAVED

Simple replacement of worn elements with minimum time expenditure results in hardly any maintenance and servicing costs.

The unique combination of the exceptional material properties of PUCEST PU, steel and carbide ensures high wear resistance and a significant noise reduction due to the sound absorbing properties of PUCEST PU. At the same time, your equipment service life is extended with the added value of significantly lower maintenance and repair costs.
